

With regard to the above plan we would like to make the following comments:

- As Key NPPF Paragraph 11a states “ all plans should mitigate climate change (including by making effective use of land in urban areas)”, it is very important that any future development should be on brownfield sites and unused industrial areas before greenfield sites are considered.

- Development on greenfield sites would be detrimental to the stated aims of encouraging and facilitating a healthy lifestyle. Any increase in the number of cars as a result of more housing would discourage walking and cycling around villages such as Goodworth Clatford where we live. It would also harm wildlife and hinder the stated goal of net zero carbon development.

- Development between the villages around Andover would create urban sprawl in time and harm their character, identity and sense of community spirit.

Yours sincerely
Gordon and Julia Love
