

13 November 2025

I object to the A3057 Western Avenue being stopped up.

This road is a major artery for Andover and these plans are not taking into account the future plans to increase the number of houses in Andover with the increased traffic that this will bring with it. The traffic congestion this will cause will stop people visiting the town centre and stop the valuable revenue that the local businesses require.

Test Valley Borough council seem to want to waste the public money on a new town center park which no resident has asked for when there is already a perfectly good park by Vigo road.

25 November 2025

As there is a supermarket, bus depot, the only way to the back of lots of shops for deliveries and several car parks including the towns multi storey car park along this road making it a single carriage way will cause traffic problems. While cars are parking it will not always be possible to get off this road and into the supermarket car park.

currently you can just drive around said cars easily in the second lane if you are not going into it. This will be even worse when a lorry is delivering.

I cannot see why anyone would want to ruin the current system which works well.

The costs for these works will be astronomical and as a Tax payer I don't think they are justified and certainly not value for money.

If Hampshire highways has money to spend on this sort of project I wonder why so many of the roads of Andover are in a terrible shape. The resurfacing of roads should take precedent over this unwanted and unnecessary change.

The council is also building a new theater along this road again with the extra traffic this will bring though from my understanding again this dosen't have a business plan so it might just sit empty for all we know again draining tax payer money.

These changes will stop people visiting the town and will drive what few businesses we have left in the town out. This will have a knock on affect to businesses like mine as they won't want signs or printed goods potentially putting us at risk of closure and more job losses for the area.
