Executive Summary: Air Quality in Our Area

Air Quality in Test Valley Borough Council

Air pollution is associated with a number of adverse health impacts. It is recognised as a contributing factor in the onset of heart disease and cancer. Additionally, air pollution particularly affects the most vulnerable in society: children and older people, and those with heart and lung conditions. There is also often a strong correlation with equalities issues, because areas with poor air quality are also often the less affluent areas\(^1,2\).

The annual health cost to society of the impacts of particulate matter alone in the UK is estimated to be around £16 billion\(^3\).

Due to the importance of the potential impact of poor air quality on health, Test Valley is required to review and assess air quality within the Borough on a regular basis. This involves the production of an Annual Status Report by 30\(^{th}\) June 2018 and is intended to maintain continuity in the Local Air Quality Management process. This report includes the results of on-going monitoring of air quality pollutants within the Borough where emissions from a range of sources could adversely impact sensitive receptors.

This Annual Status Report includes the results of nitrogen dioxide diffusion tube monitoring carried out in 2017. This has indicated trends that are either stable or downward at all 17 sites and there is no evidence that the Annual Mean concentration of nitrogen dioxide may exceed the specific Air Quality Objective of 40\(\mu\)g/m\(^3\). Based on the findings of this report, Test Valley Borough Council has found no evidence that the levels of any other relevant pollutants may exceed the

---

2. Air quality and social deprivation in the UK: an environmental inequalities analysis, 2006
3. Defra. Abatement cost guidance for valuing changes in air quality, May 2013
specific Air Quality Objectives and therefore has not identified the need to designate any Air Quality Management Areas.

Although a review of planning application received by Test Valley during 2017 has not identified any new major sources of emissions within the borough, any proposed developments which may have possible significant implications for local air quality have been assessed. Proposed large scale developments where there is expected to be a significant air quality impact have been subject to formal air quality assessment as part of the planning process.

**Actions to Improve Air Quality**

The Council takes its responsibilities for air quality very seriously and any proposals within the Borough are carefully assessed in accordance the Local Plan. Development that would or could generate potentially significant levels of pollution will only be permitted if it can be demonstrated that there would not be any adverse impact on human health, the natural environment or general amenity.

Test Valley has agreed to work with Southampton City Council to help them achieve their aim to improve air quality in the Southampton Urban Area Agglomeration Zone. The Air Quality Plan for Southampton Urban Area was originally published in December 2015 and Test Valley Borough Council will be working with our neighbouring local authorities (Southampton City Council, Winchester City Council and Eastleigh Borough Council) to target sources of nitrogen dioxide in the Southampton Urban Area (UK0019).

TVBC will explore with Hampshire County Council (HCC) the possibility of identifying possible measures linking PM$_{2.5}$ with public health and how the success of reduction measures could best be measured. These measures and any positive outcomes will then be reported in future Air Quality Annual Status Reports.
Test Valley Borough Council

We are working with Highways England in a year-long project looking at the air quality around the M27 in Chilworth in the south of the Borough. The results of this study should be available in the spring of 2019.

The South of the Southampton Borough is encompassed by the Partnership for Urban South Hampshire (PUSH), Air Quality Impact Assessment, the results of a modelling exercise for within the analysis area for NO₂, PM10 and PM2.5 has been analysed and modelled. The final report is due out later in the year.

Conclusions and Priorities

No exceedances of the current Air Quality Objectives have been identified.

The overall trends in the data has shown a steady improvement in air quality - see Figure A.1

Test Valley Borough Council will continue to carefully consider future planning applications which may have the potential to impact air quality in Test Valley and within the vicinity of the Southampton Urban Area.

Local Engagement and How to get involved

We have posted information on the Test Valley Borough Council’s website with regards to:

Air Quality:
http://www.testvalley.gov.uk/housingandenvironmentalhealth/environmentalprotection/air-quality

Sustainability:
http://www.testvalley.gov.uk/aboutyourcouncil/corporatedirection/environmentandsustainability

Travel Planning:
http://www.testvalley.gov.uk/transportparkingandstreets/public-transport
Cycling and Walking:
http://www.testvalley.gov.uk/communityandleisure/cyclingwalking

With updates with regards to new sustainable travel initiatives such as, bus services, walking and cycling provision and residents travel plans:

and,

Moreover, we are working with partners to inform the public and special interest groups, such as taxi drivers, about the need to think about air quality, such as turning off their engines when idling. Other issues such as the provision of electric car charging points across the district are being explored at a strategic level.

1 Local Air Quality Management

This report provides an overview of air quality in Test Valley during 2017. It fulfils the requirements of Local Air Quality Management (LAQM) as set out in Part IV of the Environment Act (1995) and the relevant Policy and Technical Guidance documents.

The LAQM process places an obligation on all local authorities to regularly review and assess air quality in their areas, and to determine whether or not the air quality objectives are likely to be achieved. Where an exceedance is considered likely the local authority must declare an Air Quality Management Area (AQMA) and prepare an Air Quality Action Plan (AQAP) setting out the measures it intends to put in place in pursuit of the objectives. This Annual Status Report (ASR) is an annual requirement showing the strategies employed by Test Valley Borough Council to improve air quality and any progress that has been made.

The statutory air quality objectives applicable to LAQM in England can be found in Table E.1 in Appendix E.
2 Actions to Improve Air Quality

2.1 Air Quality Management Areas

Air Quality Management Areas (AQMAs) are declared when there is an exceedance or likely exceedance of an air quality objective. After declaration, the authority must prepare an Air Quality Action Plan (AQAP) within 12-18 months setting out measures it intends to put in place in pursuit of compliance with the objectives.

Test Valley Borough Council currently does not have any AQMAs. The Council does utilise a number of local and regional plans and strategies in order to minimise and/or reduce potential impacts on air quality within the Borough. For example:

- Hampshire Local Plan (2011- 2031);
- Test Valley Borough Council Local Plan (2011 – 2029);
- Partnership for Urban South Hampshire Air Quality Impact Assessment (PUSH).

For reference, a map of Test Valley Borough Council’s monitoring locations is available in Appendix D.
Table 2.1 – Declared Air Quality Management Areas

Test Valley Borough Council has not declared any Air Quality Management Areas.
2.2 Progress and Impact of Measures to address Air Quality in Test Valley Borough Council

Defra’s appraisal of last year’s Annual Status Report concluded:

Commentary

The report is well structured, detailed, and provides the information specified in the Guidance, using the latest report template. The following comments are made:

1. The latest monitoring confirms that no exceedances of the current Air Quality Objectives have been identified.

2. The current monitoring programme appears to have been in place for at least the last five years monitoring at central urban sites in Romsey, Chilworth and Andover. There are no results close to the objective levels, thus we consider it would be reasonable to review the current programme. The Council area includes some significant trunk routes, in addition to the main urban centres, and residential areas close to busy main traffic routes should all be considered where there is relevant exposure.

The opportunity is being taken to review the monitoring locations to ensure that significant trunk roads, main urban centres and residential area close to busy main traffic routes are being considered especially in light of major developments within the Borough.

Test Valley Borough Council has taken forward a number of direct measures during the current reporting year of 2017 in pursuit of improving local air quality. Details of all measures completed, in progress or planned are set out in Table 2.2.

More detail on these measures can be found in their respective Action Plans Key completed measures are:
Test Valley Borough Council

Test Valley Borough Council has a number of measures in place during the current reporting year of 2017 which have direct and indirect benefits in the pursuit of improving local air quality. Copies of the main reference plans/strategies can be found via the web-links listed below:

Local Transport Plan (2011 – 2031)
http://www3.hants.gov.uk/transport/local-transport-plan.htm

Test Valley Borough Council’s Local Plan (2011 – 2029)
http://www.testvalley.gov.uk/resident/planningandbuildingcontrol/planningpolicy/local-development-framework/dpd/

Sustainability Strategy (2012 – 2017)

and the latest update:

http://www.testvalley.gov.uk/housingandenvironmentalhealth/environmentalprotection/air-quality

Test Valley’s priorities for the coming year are to continue monitoring concentrations of nitrogen dioxide across the Borough, ensure that all proposed development is subject to scrutiny to ensure that compliance with Policy E8 of the Council’s Local Plan and work with our neighbouring local authorities with regards to the non-compliance for nitrogen dioxide in the Southampton Urban Area Clean Air Zone. Moreover, we will continue to work with Highways Agency with regard to the the monitoring joint monitoring program.

The principal challenges and barriers to implementation that Test Valley Borough Council anticipates facing, are that the main driver for air quality in the borough is traffic. Traffic management within the borough is largely beyond the control of Test Valley Borough Council, and is currently the responsibility of Hampshire County Council and Highways England.

2.3 PM$_{2.5}$ – Local Authority Approach to Reducing Emissions and/or Concentrations

As detailed in Policy Guidance LAQM.PG16 (Chapter 7), local authorities are expected to work towards reducing emissions and/or concentrations of PM$_{2.5}$ (particulate matter with an aerodynamic diameter of 2.5µm or less). There is clear evidence that PM$_{2.5}$ has a significant impact on human health, including premature mortality, allergic reactions, and cardiovascular diseases.

Test Valley Borough Council is taking the following measures to address PM$_{2.5}$: Although Test Valley does not currently monitor for Particulate Matter, current data indicates that PM$_{2.5}$ varies across the borough with background concentrations of between 8.94µg/m$^3$ and 12.16µg/m$^3$ (Source: https://uk-air.defra.gov.uk/data/laqm-background-home). At present, there is no Air Quality Objective for PM$_{2.5}$.

Key sources of PM$_{2.5}$ include road traffic and industrial emissions and whilst TVBC only has a limited role in road traffic management it will continue to work with Hampshire County Council and Highways England in addition to Hampshire County Council’s Public Health team to reduce PM$_{2.5}$ emissions wherever possible.

Table 2.2 includes a list of existing measures, (e.g. Measure Numbers 1-5: Alternatives to Private Vehicle Use and Measure Numbers 11-18: Promoting Travel Alternatives) which not only have the potential to reduce concentrations of PM$_{2.5}$ but are likely to have a positive impact on other atmospheric pollutants including nitrogen dioxide and PM$_{10}$.

Defra’s appraisal of last year’s Annual Status Report concluded that Test Valley should collaborate with the Public Health England in respect of PM$_{2.5}$ in order to identify potential areas of concern within the borough where air quality might have a direct link with the incidence of asthma.
Test Valley’s priorities for the coming year are:

1. To continue working with our neighbouring local authorities of Southampton City Council, Winchester City Council and Eastleigh Borough Council in respect of the Southampton Urban Area.

2. Work with Hampshire Council Council’s Public Health team and Public Health England - South East in order to identify additional measures to improve air quality.

3.

The principal *challenges* and *barriers* to implementation that Test Valley anticipates facing in relation to its priorities are:

i. Traffic management within the borough is largely beyond the control of Test Valley Borough Council, and is currently the responsibility of Hampshire County Council and Highways England.

ii. It is currently prohibitively expensive for a borough such as Test Valley Borough Council to directly measure concentrations of PM$_{2.5}$.

Whilst the measures set out in Table 2.2 will help to contribute towards continuing compliance with current Air Quality Objectives, Test Valley anticipates that further additional measures not yet prescribed will be required in subsequent years to achieve compliance for nitrogen dioxide in the Southampton Urban Area.
3 Air Quality Monitoring Data and Comparison with Air Quality Objectives and National Compliance

3.1 Summary of Monitoring Undertaken

3.1.1 Automatic Monitoring Sites

This section sets out what monitoring has taken place and how it compares with objectives.

Test Valley Borough Council does not currently have any undertook automatic (continuous) monitoring sites during.

3.1.2 Non-Automatic Monitoring Sites

Test Valley Borough Council undertook non-automatic (passive) monitoring of Nitrogen Dioxide at 17 sites during 2017.
Table A.2 in Appendix A shows the details of the sites.

Maps showing the location of the monitoring sites are provided in Appendix D.

Further details on Quality Assurance/Quality Control (QA/QC) for the diffusion tubes, including bias adjustments and any other adjustments applied (e.g. “annualisation” and/or distance correction), are included in Appendix C.

3.2 Individual Pollutants

The air quality monitoring results presented in this section are, where relevant, adjusted for bias, “annualisation” and distance correction. Further details on adjustments are provided in Appendix C.

3.2.1 Nitrogen Dioxide (NO$_2$)

Table A.3 in Appendix A compares the ratified and adjusted monitored NO$_2$ annual mean concentrations for the past 5 years with the air quality objective of 40µg/m$^3$.

For diffusion tubes, the full 2017 dataset of monthly mean values is provided in Appendix B.

There have been no exceedances of the air quality objectives.

3.2.2 Particulate Matter (PM$_{10}$)

Test Valley Borough council does not monitor for PM$_{10}$.

Particulate Matter (PM$_{2.5}$)

Test Valley Borough council does not monitor for PM$_{2.5}$

Sulphur Dioxide (SO$_2$)

Test Valley Borough council does not monitor for SO$_2$
Appendix A: Monitoring Results

☒ Diffusion tube data has been bias corrected
☒ Annualisation has been conducted where data capture is <75%

Notes:
Exceedances of the NO₂ annual mean objective of 40μg/m³ are shown in **bold**.
NO₂ annual means exceeding 60μg/m³, indicating a potential exceedance of the NO₂ 1-hour mean objective are shown in **bold and underlined**.
(1) Data capture for the monitoring period, in cases where monitoring was only carried out for part of the year.
(2) Data capture for the full calendar year (e.g. if monitoring was carried out for 6 months, the maximum data capture for the full calendar year is 50%).
(3) Means for diffusion tubes have been corrected for bias. All means have been “annualised” as per Boxes 7.9 and 7.10 in LAQM.TG16 if valid data capture for the full calendar year is less than 75%. See Appendix C for details.

☐ Local bias adjustment factor used
☒ National bias adjustment factor used
☐ Annualisation has been conducted where data capture is <75%
☒ Where applicable, data has been distance corrected for relevant exposure

Notes:
Exceedances of the NO$_2$ annual mean objective of 40µg/m$^3$ are shown in **bold**. NO$_2$ annual means exceeding 60µg/m$^3$, indicating a potential exceedance of the NO$_2$ 1-hour mean objective are shown in **bold and underlined**.

(1) See Appendix C for details on bias adjustment and annualisation.
(2) Distance corrected to nearest relevant public exposure.
Appendix C: Supporting Technical Information / Air Quality Monitoring Data QA/QC

New or Changed Sources of Pollution

Test Valley Borough Council has not identified any significant changes to current sources of pollution or identified any new significant sources of pollution since the publication of the Council’s 2017 Air Quality Annual Status Report.

Dispersion Modelling

Test Valley Borough Council is involved in the Partnership for South Hampshire (PUSH Partnership) with 11 Local Authorities modelling for NOx, PM\textsubscript{10}, PM\textsubscript{2.5} and NH\textsubscript{3}. The Authority is also in partnership working with the Highways Agency on a one year data gathering exercise for NO\textsubscript{x} around the M27.

Evidence Gathering

Test Valley Borough Council is currently not collecting evidence in support of measures to prepare an Air Quality Action Plan.

Quality Assurance/Quality Control of diffusion tube monitoring

Test Valley Borough Council can confirm that as far as reasonably practicable, all 17 diffusion tubes are located in accordance with the guidance set out in the February 2008 AEA Energy & Environment report.

A copy of the “Summary of Precision Results for Nitrogen Dioxide Diffusion Tube Collocation Studies, by Laboratory” was downloaded from:

Of the 27 studies which used ESG (50% TEA in Acetone) diffusion tubes during 2016, 26 studies indicated ‘Good’ precision and 1 indicating ‘Poor’ precision.

**Diffusion Tube Bias Adjustment Factors**

The diffusion tubes used by Test Valley Borough Council are supplied and analysed (50% TEA in Acetone) by Environmental Scientifs Group (ESG) laboratories, Didcot, Oxfordshire. The bias adjustment factor of **0.77** for our 2017 diffusion tubes was obtained from the following website:

https://laqm.defra.gov.uk/assets/databasediffusiontubebiasfactorsv0317v2.xls.

**NO\textsubscript{2} Fall-off with Distance Calculator**

Three NO\textsubscript{2} tube locations (ROM5A, ROM9 AND ROM10) were subject to distance correction as there are adjacent receptors (i.e. property façades) to these monitoring locations. Two further tube locations; CHIL12 and CHIL14 were not corrected as they are both influenced by 2 busy roads (Reference: Limitation 7). The remaining diffusion tube locations are representative of public exposure.
